FEATURES & BENEFITS

- A plastic water resistant channel circular shape ideal for being mounting outdoors and in damp environments which provides a full 360 degree light output. This extrusion is a revolutionary design allowing the user to install in damp environments without water ingress.
- This channel works by using an inner metal spine inserted into a plastic outer body which works to eliminate water ingress. Simply lay the LED tape onto the Aluminium spine and insert into the channel, then use the provided end caps to seal the ends. We suggest using a further silicone glue coating inside and out.
- Suitable for both dry and damp locations.
- Available in bespoke lengths.
