## FEATURES & BENEFITS

- This channel is a deeper profile ideal for combatting spotting of individual LEDs. These channels with no trim are suitable for housing and protecting our LED strips. They allow a flush install into grooves or furniture pieces as well as prevent the much unwanted secondary refraction from reflective surfaces.

- They also act as a heat sink for them as well, which in turn will increase the LEDs lifetime as well as slowing down any brightness degradation over time.

- Suitable for both dry and damp locations.

- Available in bespoke lengths.
